### CLAIMS LISTING

1(presently amended). A thermic module for a self-heating container, wherein said container includes a bottom end with a cavity having internal walls formed therein for receiving said thermic module, said thermic module further comprising:

- a. a first cup having plastic walls and containing a first chemical reactant;
- b. a second cup containing a second chemical reactant;
- c. a dividing wall positioned between said first and second cups such that said first and second chemical reactants cannot mix;
- d. an end cap positioned below said second cup and retaining said second chemical reactant within said second cup;
- e. an actuator for puncturing said dividing wall positioned between said end cap and said dividing wall; and
- f. wherein said walls of said first cup are formed of a plastic of sufficient thinness and have a sufficiently low ~~having~~ a Vicat Softening Point between about 120°C and about 60°C such that said plastic walls expand into contact with said internal walls of said cavity upon mixing of said first and second chemicals.

2(canceled).

3(presently amended). The thermic module of claim 21, wherein said Vicat Softening Point is between about 90 °C and about 60 °C.

Application Serial No. 10/003,877  
Response to Office Action dated April 8, 2004  
Reply to Office Action of December 30, 2003

4(original). The thermic module of claim 1, wherein said actuator comprises a piercing point, a sharper cutting edge extending laterally from said piercing point, and a blunter spreading edge extending laterally from said piercing point.

5(original). The thermic module of claim 1, wherein said actuator has a plurality of cutting edges and a plurality of spreading edges.

6(original). The thermic module of claim 1, wherein said walls of said first cup have a thickness of between about 0.001 and 0.3 mm.

7(original). The thermic module of claim 6, wherein said walls of said first cup have a thickness of between about 0.05 and 0.3 mm.

8(original). The thermic module of claim 7, wherein said walls of said first cup have a thickness of between about 0.1 and 0.2 mm.

9(presently amended). The thermic module of claim 1, wherein said walls of said first cup are formed at least predominantly of either polystyrene or polyvinyl chloride.

10(original). The thermic module of claim 1, wherein said second cup includes a side wall connecting to said dividing wall and said side wall of said second cup has a thickness of at least about 0.3 mm and side dividing wall has a thickness of about 0.2 mm.

11(original). The thermic module of claim 9, wherein said second cup is formed of a plastic having a Vicat Softening Point of greater than about 120 °C.

12(original). The thermic module of claim 4, wherein said actuator is formed of a plastic having a Vicat Softening Point of greater than about 120 °C and a thickness of greater than about 0.3 mm.

Application Serial No. 10/003,877  
Response to Office Action dated April 8, 2004  
Reply to Office Action of December 30, 2003

13(original). The thermic module of claim 1, wherein side walls of said second cup are attached to said first cup and a separately formed dividing wall is positioned within said sidewalls of said second cup.

14-15(canceled).

16(original). A thermic module for a self-heating container, wherein said container includes with a bottom end with a cavity having internal walls formed therein for receiving said thermic module, said thermic module further comprising:

- a. a first cup containing a first chemical reactant, said first cup being formed of a frame structure having a top and a side window and a sheeting material covering said windows;
- b. a second cup containing a second chemical reactant;
- c. a dividing wall positioned between said first and second cups such that said first and second chemical reactants cannot mix;
- d. an end cap positioned below said second cup and retaining said second chemical reactant within said second cup; and
- e. an actuator for puncturing said dividing wall positioned between said end cap and said dividing wall.

17(original). The thermic module of claim 16, wherein said sheeting material is aluminum foil.

18(original). The thermic module of claim 17, wherein said foil is attached to said frame with an adhesive.

Application Serial No. 10/003,877

19(presently amended). ~~A self heating container, wherein said container includes with a bottom end with a cavity having internal walls formed therein for receiving a thermic module, said thermic module further comprising:~~ The thermic module of claim 1, further comprising

- ~~a. — a first chemical reactant positioned in said cavity;~~
- ~~b. — a cup containing a second chemical reactant said cup having a lip extending around its lower perimeter;~~
- ~~c. — a dividing wall positioned between said first and second reactants such that said reactants are not in contact;~~
- ~~d. — an end cap positioned below said cup and retaining said second chemical reactant within said cup;~~
- ~~e. — an actuator for puncturing said dividing wall, said actuator positioned to be activated by pressure on said end cap; and~~
- ~~f. — a pressure activated vent comprising a vent seal positioned between said end cap and said cup lip~~ used in combination with said container such that a pressure created by the mixing of said first and second reactants must exceed about 2 psi before said vent is activated.

20(original). The self-heating container of claim 19, wherein said vent is activated by a pressure of between about 4 and about 7 psi.

21-24(cancelled).

25(presently amended). The self-heating container of claim ~~19~~ 1, wherein the ratio by weight of a solid reactant to a liquid reactant is between about 0.2 and 0.5.

Application Serial No. 10/003,877  
Response to Office Action dated April 8, 2004  
Reply to Office Action of December 30, 2003

26(original). The self-heating container of claim 25, wherein the ratio by weight of a solid reactant to a liquid reactant is between about 0.3 and 0.4.

27(original). The self-heating container of claim 26, wherein the ratio by weight of a solid reactant to a liquid reactant is between about 0.36.

28-31(canceled).
